## ATTACHMENT 9.2.1 FRAM SUPPORT DATA

### **FLO-2D Model Evaluation**

#### **General**

HDR Engineering, Inc. (HDR) was requested to perform an engineering assessment of Ash Slough near the City of Chowchilla in Madera County, California based on best available information. No updated hydrologic models were provided by HDR, but HDR utilized available 30-meter topographic data to simulate two-dimensional model results upstream of the City of Chowchilla.

HDR was also tasked to provide a report evaluation to assess existing conditions, coordinate with Madera County and local interested parties on the future direction of Ash Slough. This proposed evaluation is focusing on approximately 8.0 miles of Ash Slough which includes non-project levees. The available 30-meter DEM topographic data used for this analysis does not necessarily define the levee elevations correctly, therefore, HDR recommends the FLO2D model updated with additional accuracy data when available.

Preliminary simulations for Ash Slough, located in the City of Chowchilla were conducted using the two-dimensional FLO-2D program with the generic default FLO-2D Control Variables. Caution should be used with the preliminary FLO2D model results because the topographic data does not include the DWR 2008 one-foot accuracy level of detail.

### **Model Development**

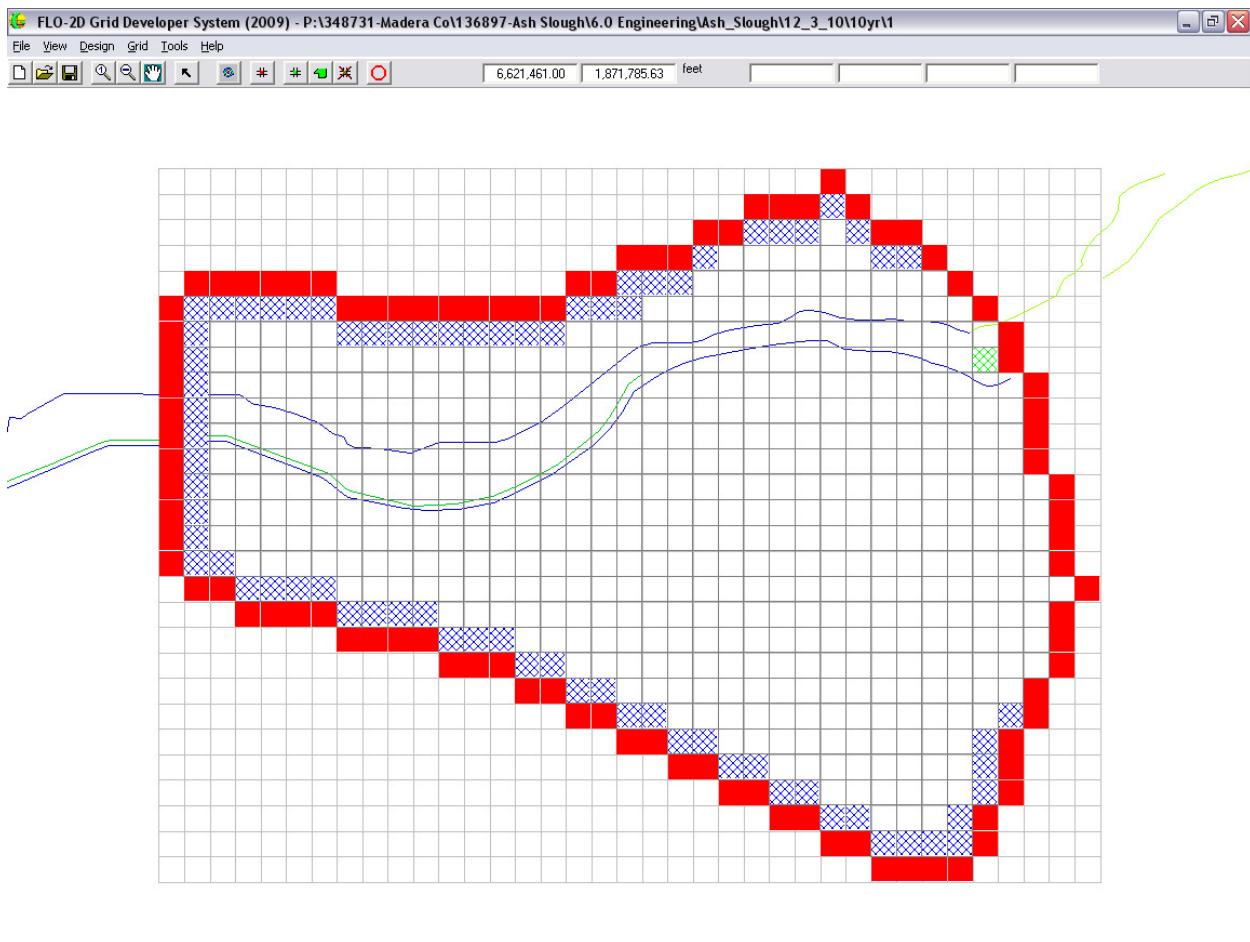

The cell size for the existing model is 300 feet. Grid elevation averaging for the existing model is based on a U.S. Geologic Survey (USGS) 30 meter Digital Elevation Model (DEM) for the City of Chowchilla. Manning's n-Values for the existing model are based on the default FLO-2D value of 0.04.

### **Inflow Data**

The inflow hydrograph for the model is located just upstream of Highway 99. Hydrographs for the 10-(10-year), 4-(25-year) and 1- (100-year) percent annual chance flood events were utilized for each simulations. The hydrograph data for the 10- and 100-year events is provided from the U.S. Army Corps of Engineers (USACE) Comprehensive Study dated 1999. The 25-year hydrograph was estimated by prorating the existing 10- and 100-year hydrograph data. The greatest assumption in the model is that the levees are assumed to be failed in order to cause this situation. This is a likely assumption since testimonies from Chowchilla Water Districts and previous analysis indicate that the maximum capacity of the channel is a 10 year event with no freeboard (4,000 cfs). This provides for a high likelihood of levee failure and an accurate scenario of this model especially since an input for "Percent Chance of Levee Failure" is built into the FRAM.

### **Data Input**

The following are a summary of the input parameters for the FLO2D simulation models.

## Simulation Summary

100-Year Event

### **Simulation 1:**

#### I. Model set up

- A. 300 ft Grids
- B. Outflows located at boundaries of model area
- C. Manning's n-Values based on default FLO-2D value of 0.04
- D. 100-year Inflow hydrographs (470hrs) upstream of Highway 99

#### II. FLO-2D Control Variables

- A. Simulation Time (hrs): 470 hours
- B. Output Interval (hrs): 1 hour
- C. Other Control Variables: FLO-2D Default Parameters

**FLO-2D Control Variables**

A screenshot of a Windows-style dialog box titled "Simulation Summary". The window contains a table with four rows. The first three rows have a light gray background, while the fourth row has a white background. Each row has three columns: "Status" (containing a checkmark icon), "Action" (containing text), and an empty column. A "Close" button is located at the bottom right of the window.

# Ash Slough - 25-year Flow Depth

5,900 2,950 0 5,900 Feet

9.2 - 58

**25year Event Parcel attribute table**

(This table was exported from the County's GIS for the 25yr event shape.)

**Commercial, and industrial lots can be summed but do not contain the sq ft information needed for FRAM Report entry. So all improved lots will be entered as residential single story without basement to be conservative.**

**total**

**1926**

**25 year Event Crop type attribute table**

(This table was exported from the County's GIS for the 25yr event shape.)

Shape area is in square feet but Subtotal is converted to Acres.

**100 year Event Parcel attribute table**

(This table was exported from the County's GIS for the 100yr event shape.)

Commercial, and industrial lots can be summed but do not contain the sq ft information needed for FRAM Report entry. So all improved lots will be entered as residential single story without basement to be conservative.

## **Model Map**

<u>Sheet Name</u>	<u>Description</u>
Menu:	Front page of model, with links to key sheets
Instructions:	Description of how this model should be used
Inputs:	Project information to be entered by user
BCA Summary:	Summary data resulting from Cost-Benefit Analysis
Assumptions:	Master page containing unit damage assumptions
Depth Damage Curves	Data describing stage damage relationships
Residential:	Direct residential building and contents costs
Commercial & Industrial:	Direct commercial and industrial building and contents costs
Agricultural:	Direct losses to agricultural production
Roads	Direct Losses to roads and infrastructure
Special Cases:	Table for entering information about special case buildings
Without Project EAD	Calculation of Estimated Annual Damages (EAD) without-project
Graph Data	Data used to develop graphical outputs
With Project EAD	Calculation of Estimated Annual Damages (EAD) with-project
Stage v Damage Curve	Graph of flood stage v flood damages
Loss Probability Curve	Graph of flood exceedance probability v flood damages

Project Name:

**Ash Slough Arundo Eradication Project**

Description

This project involves the eradication of Arundo donax, a non-native invasive bamboo, from critical portions of Ash Slough, a flood control channel which runs adjacent to the City of Chowchilla. Heavy Arundo infestation in Ash Slough blocks flood flows and causes flood hazards to the nearby city.

Proposed project capital cost:

**\$ 2,397,588**

[Note: construction costs which are assumed to occur in one year.]

Change in annual O&amp;M costs:

**-\$ 10,000**

[Note: the change in annual O&amp;M costs compared to without project condi

PV of future O&amp;M costs:

**-\$ 157,619**(at **6%** discount rate over **50** years)

PV of future costs

**\$ 2,239,969**

[Note: the sum of capital costs plus the PV of O&amp;M costs.]

**Benefits**

	Actual	Potential	
EAD without project	\$ 3,479,020	\$ 3,570,078	[Note: for stormwater projects use "Potential" damage which ignores s
